

Strong teams are made by boosting the team spirit!

That's why choosing the subject "Experts in Team Work" is a great way for enhancing the sense for team work. Despite the regular program, and the development of a project idea for reducing air pollution in Skopje, we visited Escape room Skopje.

The idea of Escape room is solving a mysterious task in order to get out of the locked room. Thinking in logical manner under pressure, precise observing, and the most important - exchanging ideas between the team members is what lead to the solution. Great experience where using the individual perception leads to strengthening the team spirit. That's what we really experienced and achieved, and what should be regular practice not only for students but also for team building in companies. A perfect step to becoming experts in team work!

Thankful to the responsible professors for the idea and the QIMSEE project for providing this experience, we feel we are step closer to becoming experts in Sustainable Energy and Environment.

P.S. Highly recommended for anyone willing to become a great engineer ;)
