| 10. | Purpose of the course program (competences): | | | | | | | | | | | |
| | Getting of the knowledge in the field of material removal process. Understanding of the phenomena of macro, meso and micro levels in the zone of metal transformation and theory of chip formation. Also, getting knowledge in the field of experimental methods for research of physical phenomena and technological effects. | | | | | | | | | | | |
| 11. | Contents of the course program: | | | | | | | | | | | |
| | Study of the physics and mechanics of the machining process by material removal. Vibration and thermal phenomena in the cutting process. Mechanisms and criteria of the tool wear and metal workability. Analysis, modeling and simulation of physical phenomena and technological effects on the machined surface. Experimental methods for the study of the metal transformation process and chip formation. | | | | | | | | | | | |
